

Daum Crystal Pieces Care & Maintenance

We would recommend using a soft, dry microfibre cloth to care for your Daum products.

Do not use water or detergent with the cloth.

Occasionally, if there is a thick layer of dust, we would recommend:

- Wash the product in lukewarm water, without detergent.
- Leave the item to dry for 24 hours.
- Apply a liquid wax using a brush, or in spray form from the Daum care kit, then dry once again.
- Use a soft cloth (not fluffy) to shine the product.
- If the piece contains metal, it is advisable to not get these wet, simply dust these before shining them with the soft cloth.

When using the products, we would recommend the following:

- Do not place the piece outside, in direct sunlight, or in very hot environments.
- Avoid placing the object next to a strong heat source to avoid thermal shocks.

Please note, these are only suggestions. Daum accepts no responsibility and cannot be held accountable for the use and care of Daum pieces after they have been purchased.
